## 52 Gal.

# Rain Barrel

## Rain Water Harvesting

- Ideal for Water Restrictions and Droughts
- Save Water - Save Money
- Easy to Install and Use

Environmentally  
Sound

**Level ground** under downspout adding sand or crushed stone as necessary. Ground must be able to support the weight of a full rain barrel. (55 gallons of water weighs nearly 500 pounds.)

**Elevate Rain Barrel** if necessary to increase water pressure. You can use bricks, cinder blocks or pressure treated wood to build a platform.

**Cut the downspout** at a point above the Rain Barrel leaving adequate space to re-attach the bottom elbow. The spout should be reassembled a few inches above the barrel lid screen.

**CAUTION:** Do not use water for drinking by humans or animals. Never use for cooking or washing which may result in ingestion of the water. Use water only for watering plants or outdoor cleaning.
